5) Species: Arabidopsis thaliana (mouse-ear cress)

5) Date: 13-Jan-1995 #sequence_revision 13-Jan-1995 #text_change 01-Dec-2000

6) Accession: S38196; T00773

1) Sauer, N.K.

1) Unbmitted to the EMBL Data Library, October 1993

1) Poscription: SUC1 and SUC2: two sucrose transporters from Arabidopsis thaliana.

1) Reference number: S38196
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1025 GluThrGlyAspValGlyProMetGlyProProGlyProGlyProArgGlyProAla 1044

C; Complex: type V collagen may be a homotrimer of alpha 1(V) chains (see PIR:CGHUIV),
alpha 2(V) chain and one alpha 3(V) chain, initially linked by disulfide bonds among
ength, is formed with desmosine cross-links made from lysine and allysine residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                    A; Molecule type: DNA A; Restaudes: 1449-1463, Ex,1465-1495, A' <TSI>A; Restaudes: 1449-1463, Ex,1465-1495, A' <TSI>A; Cestaudes: 1449-1463, Ex,1465-1495, PIDN: AAA51858.1; PID: 9179696 A; Cross-references: GB: J03051; NID: 9179695; PIDN: AAA51858.1; PID: 9179696 A; Note: the authors translated the codon GAA for residue 1460 as Gln, and GAG for rest c; Comment: Profiles and 1981nes at the third position of the tripeptide repeating unit are 5-hydroxylated and subsequently 0-91ycosylated.
C; Comment: The amino-terminal propeptide domain appears not to be completely cleaved.
                                                                                                                                                                                                         R;Tsipouras, P.; Schwartz, R.C.; Liddell, A.C.; Salkeld, C.S.; Weil, D.; Ramirez, F. A. Wote: the composition of peptides comprising residues 1-9 and 1-19 confirms the seq A. Note: this region (residues 651-671 above) probably corresponds to positions 1032-1 c. Comment: Prolines and lyshnes at the third position of the tripeptide repeating unled and subsequently 0-glycosylated.

C. Comment: The order of the nine CNBr peptides in the alpha 1(1) chain of rat skin co c. Comment: The complete chain contains 1052 residues.

C. Comment: The complete chain contains 1052 residues.

C. Superfamily: collagen alpha 1(1) chain; fibrillar collagen carboxyl-terminal homolo C. Keywords: blocked amino end (Glx) (probably pyrrolldone carboxylic acid) #st F. 1/Modified site: blocked amino end (Glx) (probably pyrrolldone carboxylic acid) #st F. 9404/Almiding site: carbohydrate (Lys) (covalent) #status experimental F.103/Modified site: 5-hydroxylysine (Lys) (covalent) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2131 AGAGGGACGCCCCAGCCCCCAGCTGTGCAGCTACGCACCTCAGCAGCACCAGGGTGGCAGC 2072
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1972 CCTCCA-------1950
